# Roath Dock Treatment and Recycling Centre Permit number EPR/LP3439HM

## Introductory note

#### This introductory note does not form a part of the permit

The main features of the permit are as follows.

The site is located within Cardiff Docks on the East Quay of Roath Dock. The facility is split into three yards occupying a footprint of 0.5 Ha.

The permit allows the facility to undertake waste treatment activities including treatment of waste oils for recovery and physico-chemical treatment of wastes. Wastes treated by physico-chemical treatment consist of liquid waste acids, alkalis and sludges. These wastes are treated by neutralisation, precipitation and filtration.

The main focus of activities is the newly added treatment of Air Pollution Control residues (APCr) from incinerators by removal of the soluble content by washing. The facilty will have the capability to produce two specifications of material. It will produce either a synthetic gypsum material or a material with high residual lime content which can be used as a cement substitute.

In future Castle wish to include a cement blending operation. This will allow the site to use and mix bulk cement and prepare ready made concrete products.

The status log of the permit sets out the permitting history, including any changes

Solidification processes only change the physical state of the waste (e.g. liquid into solid) by using additives without changing the chemical properties of the waste.

<sup>&</sup>lt;sup>2</sup> A waste is considered as partly stabilised if, after the stabilisation process, dangerous constituents which have not been changed completely into non-dangerous constituents could be released into the environment in the short, middle or long term.

<sup>&</sup>lt;sup>8</sup> Stabilisation processes change the dangerousness of the constituents in the waste and thus transform hazardous waste into non-hazardous waste. Solidification processes only change the physical state of the waste (e.g. liquid into solid) by using additives without changing the chemical properties of the waste.

<sup>&</sup>lt;sup>9</sup> A waste is considered as partly stabilised if, after the stabilisation process, dangerous constituents which have not been changed completely into non-dangerous constituents could be released into the environment in the short, middle or long term.

The result given is the maximum value (or the minimum value in the case of a limit that is expressed as a minimum) obtained during the reporting period, expressed in the same terms as the emission limit value. Where the emission limit value is expressed as a range, the result is given as the 'minimum – maximum' measured values.[2] Where an internationally recognised standard test method is used the reference number is given. Where another method that has been formally agreed with Natural Resources Wales is used, then the appropriate identifier is given. In other cases the principal technique is stated, for example gas chromatography.
